Summary

Senior .NET backend/platform developer building observability systems, workflow-heavy SaaS, and agentic AI products. Deep experience in C#, Elasticsearch, SQL Server/PostgreSQL, ingestion pipelines, background workers, and cloud delivery. Ships software that makes noisy systems easier to query, operate, and automate.

Skills

C#, .NET, ASP.NET Core · SQL Server, PostgreSQL · Elasticsearch, Kibana, OpenTelemetry · API design, ingestion pipelines, background workers · Docker, Kubernetes, Helm · Azure · GitHub Actions / Azure DevOps · AI-assisted workflows, MCP tooling

LinkedIn Skills Assessments (2025): C# & Microsoft SQL Server — **Top 5%**, OOP & Design Patterns — **Top 30%**

Experience

Senior Applications Developer — BMC Software · Jan 2021–Present

Continuity through acquisitions: Stackify → Netreo (2021) → BMC (2024)

- Own backend and platform work across observability, monitoring, and search systems in a multi-tenant SaaS environment.
- Drove Elasticsearch v1 → v7 migration and tenant tiering to dedicated clusters for high-cardinality workloads.
- Performance-tuned ingestion APIs and worker services handling billions of logs across multi-terabyte datasets, improving JSON parsing, Redis messaging, SQL throughput, and Elasticsearch bulk indexing.
- Led migration work for **1,000+** monitoring customers across website checks, SQL, Azure Service Bus, and log-query monitors.
- Automated PostgreSQL partition lifecycle and other operational maintenance to reduce manual intervention and improve scalability.
- Upgraded Helm/Kubernetes stacks through API deprecations, added Docker-based integration tests, and drove rigorous PR reviews.

Senior Backend .NET Developer — Full Scale · Nov 2018–Mar 2022

- Optimized APIs and SQL for a SaaS submissions platform, removing N+1 patterns, cleaning migrations, and building mid-tier services that improved delivery speed and reliability.

Backend .NET Developer — passionITe / Rapid Source Solutions · 2012–2018

- Built SOAP services and telecom billing/subscription systems on .NET and SQL Server, including replication and high-availability work for transactional workloads.

Projects

- **Goblin Board** - goblinboard.com - AI-assisted delivery board that turns requirements into PM, Dev, QA, and Deploy workflows with human approvals and agent orchestration.
- **Sqloom** - github.com/jgador/sqloom-mssql - Local-first SQL assistant for VS Code that uses MCP tooling for schema exploration, table scripting, and constrained SQL Server workflows.
- **Repository Synapse** - github.com/jgador/synapse - Repo-local memory CLI that uses Git history to surface related files, tests, docs, and workflows for AI coding agents.
- **Loggle (open source, MIT)** - github.com/jgador/loggle - Self-hosted observability stack built around OpenTelemetry Collector, Elasticsearch, Kibana, Docker, and Azure deployment workflows.
- **Talio** - talio.ayumlabs.com - Mobile-first expense capture product with a SQL-first backend, Expo React Native app, admin dashboard, and production deployment workflows.
- **PisoChatGPT** - affordable AI service for Filipinos with **1,300+ users**, combining chat, image generation, and document analysis on Azure OpenAI / OpenAI.
- **Cebu Port Authority Online Permits** - permits.cpa.gov.ph - Lead developer for a public-sector permits and identity workflow spanning applications, approvals, documents, and deployment.

Education

BS Computer Science, *cum laude* — Asian College of Technology (2007–2012)

Student programmer scholar; contributed to the school enrollment system.
